 **DELTA**
Smarter. Greener. Together.

More Rapid, More Stable, More Precise

Delta Electronics, Inc., a leading manufacturer of industrial automation products, is pleased to announce the launch of its new high-performance ASDA-A2 series servo motors and servo drives with motion control.

The current trend for motion control has the control command source close to the drive. In response, Delta has developed the new ASDA-A2 series that offers excellent motion control so that the external controller is almost eliminated. ASDA-A2 series features a built-in electronic cam (E-CAM) function which provides an excellent solution for flying shear, rotary cut and synchronized motion applications. The all new position register control PR mode is a unique and significant function that provides a variety of control modes to enhance system performance.

The ASDA-A2 series also supports various industrial communications protocols, such as CANopen, DMCNET, EtherCAT which offers higher performance and high speed communications and enable the drive to integrate with other part of the automation more efficiently and effectively. The full-closed loop control, auto notch filter, vibration suppression and gantry control functions help to perform complex motions that require high precision and smooth operation. The 20-bit superior resolution encoder which is essential for accurate positioning applications is equipped as standard. In addition, the outstanding Capture and Compare functions for high-speed pulses offer the best support for stepless positioning. Other additional functionality, such as up to 1kHz frequency response, innovative editing software, high-speed PC monitoring (similar to a digital oscilloscope), and more, all drastically maximize the performance of the ASDA-A2 series.

Delta's new ASDA-A2 series is the ultimate servo system providing a total solution for a wide range of machine tools and industrial applications

Part Names and Functions

● LED Display / Operation Panel / Charge LED

• LED Display

The 5 digit, 7 segment LED displays the servo status or fault codes.

• Operation Panel

Function keys used to perform status display, monitor and diagnostic, function and parameter setting.

Function Keys:

MODE : Press this key to select/change mode

SHIFT : Press this key to shift cursor to the left

UP : Press this key to increase values on the display

DOWN : Press this key to decrease values on the display

SET : Press this key to store data

• Charge LED

A lit LED indicates that either power is connected to the servo drive or a residual charge is present in the drive's internal power components.

● Full-Closed Loop Control Interface

- Used to connect linear scale and encoder for controlling A, B, Z phase signals.

● I/O Interface

- Used to connect Delta's DVP series PLC or other external controllers for controlling I/O signals.

● High-speed Communication Port

- 1-in/1-out communication ports offer easy serial connection.

● Motor Encoder Interface

- Used to connect the encoder of the servo motor

● Extension Digital Input Connection Port

- Used to connect a removable digital input terminal block. Max. 6 digital inputs can be added.

● Serial Communication Port

- Used to connect PLC, HMI, and other controllers for RS-485 / RS-232 serial communication.

● USB Connection Port

- Used to connect personal computers or notebooks.
- Ver 1.1 USB is equipped as standard.
- Direct connectivity to personal computers or notebooks, capable of accessing data through ASDA-Soft configuration software.
- Monitor speed upon software is up to 1Mbps.

● Internal & External Regenerative Resistor Terminal / Control Circuit Terminal / Main Circuit Terminal

● Internal & External Regenerative Resistor Terminal

1. When using an external resistor, connect it to P ⊕ and C ⊖, and ensure an open circuit between P ⊕ and D.
2. When using an internal resistor, ensure the circuit is closed between P ⊕ and D, and the circuit is open between P ⊕ and C. (Note: Please refer to the table of regenerative resistor specifications for the models with a built-in regenerative resistor.)
3. When using an external braking unit, connect it to P ⊕ and D, and ensure an open circuit between P ⊕ and C.

● When using an external braking unit, connect it to P ⊕ and ⊖

● Control Circuit Terminal (L1C, L2C or DC24V, DC0V)

- 220V Series: L1C, L2C are used to connect 200 ~ 230Vac, 50/60Hz single-phase or three-phase power supply.
- 400V Series: DC24V, DC0V are used to connect 24Vdc ±10% power supply.

● Main Circuit Terminal (R, S, T)

- 220V Series: Used to connect 200~230Vac, 50/60Hz commercial power supply.
- 400V Series: Used to connect 380~480Vac, 50/60Hz commercial power supply.

● Servo Motor Output (U, V, W)

- Used to connect servo motor. Never connect the output terminal to main circuit power as the AC drive may be damaged beyond repair if incorrect cables are connected to the output terminals.

● Ground Terminal

- Used to connect grounding wire of power supply and servo motor.

● Heatsink

- Used to secure servo drive and for heat dissipation.

Footnote:

- 400W ~ 4.5kW servo drives provide a built-in regenerative resistor.
- When the fault, ALE05 (Regeneration Error) occurs, please increase the regenerative resistor capacity or decrease the regenerative resistor resistance (the regenerative resistor resistance should not be less than the minimum allowable resistance listed in the above table.)
- If the situation is not improved after increasing the regenerative resistor capacity or decreasing the regenerative resistor resistance, please purchase regenerative resistor module.
- When combining multiple small-capacity regenerative resistors in parallel to increase the regenerative resistor capacity, make sure that the total resistance value of the regenerative resistors should not be less than the minimum allowable resistance listed in the above table.
